

\LaTeX Fundamentals: Part 2

Presentations

Isabelle Cohen
DLab, Fall 2018

1 Introduction

2 Customizing your presentation

3 Tables and figures

Presentations in \LaTeX

You can use \LaTeX to make your presentations! Today, we'll look at using the beamer package for this.

Presentation basics

- Usually you'll want to use bullet points in your presentation
- This is easy to do.
 - You can even indent by creating a new itemize environment inside of an itemize environment.
- Just make sure to close the itemize environment at the end of the frame!

Finding themes and colors

- There are a lot of other formatting and color options for beamer

Finding themes and colors

- There are a lot of other formatting and color options for beamer
- I find this theme gallery useful:
http://deic.uab.es/~iblanes/beamer_gallery/

Finding themes and colors

- There are a lot of other formatting and color options for beamer
- I find this theme gallery useful:
http://deic.uab.es/~iblanes/beamer_gallery/
- There's even a Berkeley theme!

Inserting a table

Tables look much the same in beamer as in \LaTeX .

Table: Animal Prices

| Item | | |
|------------------------------------|-------------|------------|
| Animal | Description | Price (\$) |
| Gnat | per gram | 13.65 |
| | each | 0.01 |
| Gnu | stuffed | 92.50 |
| Emu | stuffed | 33.33 |
| Armadillo | frozen | 8.99 |
| We can include helpful notes here. | | |

Adding figures

So do figures.

(a) Berkeley 1

(b) Berkeley 2

Figure: Berkeley at sunset - twice
